TARGETS**

# TARGET COMPONENT COMPABILITY SCHEME

## DUELING TREE

### FULL SET UP:

- MULTIFUNCTIONAL BASE
- DUELING STAND
- TARGETS

Due is challenging system designed to improve shooter response time under tight conditions and dipped distances. It can be used for training both one person and two - at the same time, competing each other.

DUELING STAND made from a thick-walled steel angle, welded thick-walled pipe fixtures for targets. Stand fix in base under angle - providing security against ricochet.

TARGETS made from 10mm thick armored steel. They are usable with subsequent ammunition types: 9x19, 5.56x45, 7.62x51.

Dimensions of the target hit area is 150mm.

Targets can be purchased in different numbers: 4pcs; 6pcs and 8 pcs.

## ACTIVE TARGETS

### FULL SET UP:

- MULTIFUNCTIONAL BASE
- FIXING STAND
- SILHOUETTE TARGET
- MOVING TARGETS

Active targets are designed to develop tactical shooting abilities in close distance - additional shooting option simulations and simulations-shooting in motion. All targets are fixed to fixing stand and multifunctional base.

FIXING STAND consists of thick-walled steel angle leg and target fixation nest. Front of nest is made from armored steel which provide resistance to hits.

SILUET TARGETS. At this moment we offer three silhouette targets which has different layout and shape. Each silhouette needs a different one set of moving targets. The silhouette attaches to fixing stand under an angle to provide protection against ricochet. No fasteners is needed for that. Silhouettes and targets are made from armored 10mmthick steel. Those are used for training with the following types of ammunition:  
9x19, 5.56x45, 7.62x51.

## MULTIFUNCTIONAL BASE

Multifunctional base is designed to be used with both dueling tree, and active targets, both for those who are offering at the moment both planned in future.

The base is made of prefabricated and disrupted to take after fewer places for transportation. Support legs can be attached and locked in a few seconds reinforcing it with a crosstalk pins.

When placed on a soft ground the base can be strengthened at the side with the tent poles (not included in the kit).

For protection of base front plate is made from armored steel.
